

## General FIBO Decisions

**1.0** **Ontology Publisher** is the name of all software that collectively tests and builds FIBO releases.

Ontology-Publisher open source in [GitHub](#). To download and use, a person must have a GitHub account. It is free.

**2.0** **Protégé 5.X** is the official version we support. If people want to use another version, they are on their own.

**3.0** Only new content needs to be added to a diagram or have new diagrams created for it. Therefore, we do not need to check every line of OWL after all. As long as the diagrams can show all the features of the OWL, they can be normative.

**4.0** We only use CCM as a stand alone edit tool - only emit the affected ontologies. Other owl tools do the same

**5.0** We settle on Sesame for Serialize and OWL API for publishing
